rohamsafaeisohi.github.io

I find the manual, repetitive work in a business that AI or Python can take over — and build the complete system that runs it: n8n workflows, backend and APIs, admin panels and web apps, and AI integration with LLMs and agents. I ship with strict types, row-level security and automated end-to-end tests. Open to full-time roles and freelance projects.

CORE SKILLS

Automation & AI
n8n workflows, LLM / AI agents, webhooks, REST APIs, Python scripting

Backend & real-time
Node.js, Fastify 5, Python / Django, WebSockets, LiveKit (WebRTC), ONNX Runtime

Frontend
TypeScript, React 19, Next.js 16, Tailwind CSS v4, shadcn/ui, Vite, PWA, RTL interfaces

Data, security & delivery
PostgreSQL, Supabase (RLS), Docker, Caddy, pnpm monorepos, Playwright, Vitest, Pytest

SELECTED PROJECTS

HamNeshin

AI · Real-time

Records Persian-language meetings, transcribes them, identifies who said what, and delivers a summary with action items.

- Real-time audio and video with the LiveKit (WebRTC) client and server SDKs.
- On-premise speaker diarization with ONNX Runtime — recordings never leave the organisation's infrastructure.
- One-command VPS deploys through a custom Node CLI with atomic releases and rollback.

`TypeScript · React 19 · Fastify 5 · LiveKit · ONNX · WebSockets`

AdvertisingPanel

Workflow system

Internal tool that moves every ad campaign from brief to published banner through seven roles, each with its own view and approval step.

- Role-based access for supervisors, scenario writers, scriptwriters, banner designers and admins.
- No duplicate campaign IDs under concurrent submissions, thanks to database-level locking.
- Playwright tests drive five roles at once on desktop and mobile layouts.

`Python · Django · PostgreSQL · Docker · Playwright`

Qaf

LegalTech platform

Platform for a law practice: a client portal, an attorney dashboard and an admin panel sharing one codebase.

- pnpm monorepo — web app, panel and shared UI / logic packages versioned together.
- Row-level security in Supabase, verified by 44+ automated tests so clients only ever see their own files.
- Architecture Decision Records document why each major technical choice was made.

`Next.js · TypeScript (strict) · Supabase RLS · shadcn/ui · Vitest`

Refahi

PWA

Employee benefits portal where staff order and book services from their phone, with SMS sign-in and push notifications.

- SMS one-time-password login and server-sent Web Push notifications; installable and offline-capable.
- One-click Excel reports for the accounting team, generated from live data.

`Next.js 16 · React 19 · Supabase SSR · Tailwind v4 · Web Push`

HOW I WORK

01 Discover
Map the process and find what AI or Python can take over.

02 Design
Workflow, data model and screens, with an agreed scope and timeline.

03 Build
n8n, backend, panels and the AI layer in small, testable steps.

04 Launch & support
Deployed, monitored, documented and handed over.
